## Activities

Key Club (2-3 years.) Helping communities, schools, and outside country connections. In Key Club, sell things to students making money for organizations, donated many creations to organizations and participated in Food Packing Events for other counties. I helped design things that got implemented into the school. (Art, classes, events.) R.A.C.E. Club (Starting Senior year.) Band (Starting Senior year.) ACT/SAT Club Was a club in 9th grade I participated in to learn more about the ACT and practiced for the test. Workout Club (Starting Senior year.) I have work experience outside the school with sales like festivals, community events, and a self-owned business through Young Living. I have participated in community events such as parades, golf outings, honor flights, tornado damage with the community, organizing events and ribbon cuttings with my internship for the community.

## 2021 Internship

My internship was with Amanda Byers, President of Dayton Chamber of Commerce. (Former President of Beavercreek Chamber of Commerce.) I learned a lot about getting companies and businesses on their feet when coming into the city. I got to be part of a board and complete tasks for the City of Beavercreek. Ribbon-cutting, press conferences, and community events took place during this internship. Since my end goal and objective is to be part of a company and I already have a lot of knowledge on computers, I took the time to internship a business-related job. This has given me the chance to get more involved in the community and get hands on with the business feel.

## Personal Details

**Address:** 605 Riverwood Drive

**Mobile Phone Number:** +1 (937) 999-9020

**Email:** masonosten@gmail.com

**Date of Birth:** June 15, 2004

Dayton Regional STEM School: Senior

## My Objective

I am a challenge-seeking student that wants to pursue my passion towards a business of my own regarding computer science, computer hardware, or cyber security. Coming from a STEM school and taking 6 High school engineering classes, I have been able to work with computers since the beginning of middle school. That has helped me become more aware of what I'm passionate about and what I want to do in the future.

## Interest and Hobbies

I love playing instruments and have played piano for 11 years, guitar for four, ukulele for three, and started singing. I love space and science, so I enjoy learning about planets and new solar systems. (What is on a plant also intrigues me.) I tend to draw when I am bored giving myself time to be creative. Another hobby I have is working out. I took a physical-education class in 11th grade teaching how to keep myself in shape and what I should be eating. Video games is a leisure I tend to have when I am not busy. Some things that interest me are community events and helping people. I always try to be participated in events, and create helping hands towards those in need. Some out-of-school events include, helping tornado victims rebuild their houses, getting school supplies to children in need, and helping Veterans get to Washington D.C. to see their brother and sisters' memorials.
